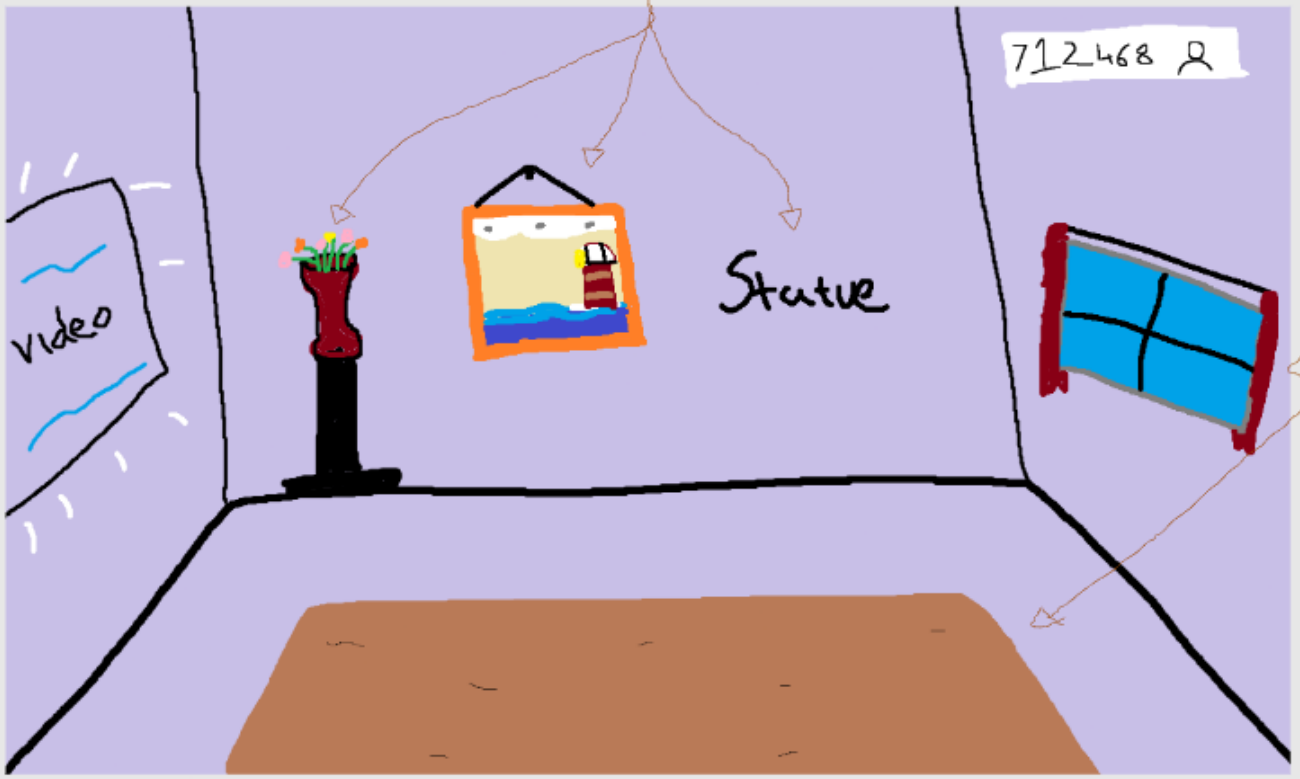
Memory Room Game

03/02/2026

First Person Perspective

Videos can be projected in the players room



Customisable "Tombstones"

Multiple "Tombstones"

Customisable "Room"

Calming audio played in background, can be toggled on and off and changed to a selection of different tracks

No Win/Loss conditions as this is more of a simulator/Experience

Multiplayer function to share rooms (private default)

Played in the browser for easy access and accessibility to everyone

Multiple objects user can select as memory objects ("Tombstones") such as : Photos, Flowers, Paintings, Statues

The intended player experience is to create a virtual space where users can go to remember lost loved ones. Users will be able to upload images, videos, information, links and more. These can be viewed through a "gravestone" which is a object that will retain these memories and display them when the user interacts with the "gravestones".

Experimentation purpose: Loss, Mourning, Remembrance all displayed and expressed through a game.

I will be researching and exploring how individuals deal with loss and remembrance, what a person remembers the most about a loved one. I will use this research to design how my game will be designed.

miro

Interact with "Tombstone"

((Press E to remember))

Displays : Image
Name
/Nickname
DOB

By Default

Mirrors how a real gravestone works
